Work

Slack, Vancouver — *Senior Software Engineer, Promoted (2017)*

AUGUST 2016 - PRESENT

Mobile Design System Lead: Led a team of engineers to build out a design system that powers the mobile UI. Included extensive design & product consultation as well as technical architecting.

Autocomplete & Search: Built efficient offline-capable autocomplete experience. Supported matching in multiple languages, muxing of network results, and a ‘fuzzy’ finite-state-machine-driven experience.

Data Providers: Pioneered a layer above the database that provided an asynchronous stream-based API for retrieving client data models. This became the primary layer upon which all features in the app were then built.

Joist, Toronto — *Software Engineer*

JUNE 2015 - JUNE 2016

Built out and maintained the iOS app. Assisted with front-end web work.

Airbnb, San Francisco — *Software Engineering Intern*

SEPTEMBER 2014 - DECEMBER 2014

Worked on the iOS app. Built out the entire Chat screen, fixed bugs, and prototyped map pin clustering.

IBM, Toronto — *Software Engineering Intern*

SEPTEMBER 2014 - DECEMBER 2014

Built front-end web prototype and mobile apps to demo potential iBeacon applications for major clients.

Zynga, Toronto — *Software Engineering Intern*

JANUARY 2012 - AUGUST 2013

Implemented key features in Scramble With Friends™ Android. Worked on a cross-platform mobile economy-management framework for all of Zynga’s games which were written in a variety of languages.

Education

University of Waterloo, Waterloo, Canada — *BASc (Mechanical Engineering)*

SEPTEMBER 2010 - APRIL 2015

I studied Mechanical Engineering at the University of Waterloo. *Key technical electives included:* fluid mechanics, energy conversion, finite-element methods, fluid-powered control systems.

Personal Projects

BendixKing KT-76A Transponder — *Homemade Flight Sim USB Peripheral*

A replica of a vintage BendixKing KT-76A aircraft transponder, for use with Microsoft Flight Simulator. I designed all parts in AutoDesk Fusion 360. I then manufactured some parts by laser cutting acrylic sheets, and others by 3D printing using both SLA and FDM processes depending upon the tolerances and surface quality required. I designed the electrical pieces, and used an Arduino Nano as the microcontroller, which I mounted using a custom-built bracket. The display was a combination of a 7-segment display with polarizing light filters and clear acrylic.

Games — *Mobile & Web (Flash)*

Egger: An iOS game written on the Cocos2D game engine. Shipped to the app store in 2010, and grew into a seat on the App Store 'Top 100 Free Games' list in France.

Luggage Loader: A Flash-based game or memorization hosted on Facebook.

Gobbla: A Flash-based game hosted on Mindjolt.

Greeting Cards — *Hand-drawn cartoons*

I draw greeting cards by hand and in Adobe Illustrator. Some samples can be found under the hobbies section of my personal website: www.jasonwinn.ca.

Programming Skills

Platforms — *iOS, Mac, Android, Web. Ordered by familiarity.*

Languages — *Swift, Objective-C, C, Java, C#, C++, Python. Ordered by familiarity.*

iOS has been my most recent focus. I have intimate knowledge of UIKit, CoreAnimation, CoreGraphics, and a high degree of competency with a variety of ORMs and foundational frameworks.

I have a thorough understanding of layout systems on multiple platforms, with an emphasis on iOS, Android, and Web. I enjoy cross-pollinating layout system techniques in order to achieve performant declarative layouts.

Beyond Programming Skills

Flying Aircraft — *Private Pilot licensed in 2012 in Toronto, Canada*

I currently fly out of Boundary Bay Airport (CZBB) in Vancouver, Canada. I have flown a variety of light General Aviation aircraft. I am a cautious and curious pilot, and an avid flight simmer.

Graphic Design — *Adobe Creative Suite*

I began with website and logo design at a young age. I've now explored a variety of media. I was the chief layout editor for my school newspaper, and won the Toronto Star's 'layout & design' award. I worked for a digital advertising agency where I designed everything from campaign splash pages to banner advertisements, for major brands. Now, I spend my time illustrating greeting cards and prints for my own personal enjoyment.
